

Jérôme Velociter

Freelance Product Engineer & Tech Lead

jerome@velociter.fr · www.jvelo.at · linkedin.com/in/jvelociter · github.com/jvelo

Tech and product lead with 20 years of experience building web products and industrial software, including 10 as a founder. I help teams take products from architecture to production, evolve existing systems and solve hard engineering problems. I combine product ownership with hands-on engineering in TypeScript, Python and Go, across cloud and edge infrastructure.

Toulouse, France · Open to full-time or fractional engagements

Remote or hybrid · Available for regular travel to Paris, London and Amsterdam

EXPERIENCE

2026 – present

Freelance Product Engineer & Tech Lead

Product engineering, technical leadership and team coaching in AI-assisted development. Practical guidance on integrating coding agents into delivery workflows, from task scoping and architectural decisions to code review and verification.

2021 – 2026

Co-founder — Software, Product & Marketing · Orius · Toulouse, FR

Turnkey systems for growing high-value plants indoors. Selected for France 2030 funding.

- Built the software stack from scratch, then led a small team running it in production: growth chamber (phytotron) automation, IT/OT monitoring, and BiomeOS, the cloud and data platform. Dozens of growth units across three continents on an offline-first architecture, so each site keeps operating through connectivity loss.
- Built the control and data software for two projects with CNES, the French space agency: prototype greenhouses for lunar and Martian habitats, and Gravidlab, a gravity simulator for plant biology.
- Translated agronomic requirements into executable control protocols, including calibrated lighting and nutrient management.
- Owned BiomeOS as a product and designed its interfaces: what to build, in what order, for which users, from research labs to production sites.
- Led marketing: brand identity, website and sales collateral.
- Co-led a €4M funding round, owning the investment narrative and investor materials.

2016 – 2021

Director of Software Engineering · Agricoool · Paris, FR

2018 – 2021

- Grew the engineering team from one engineer to eight, across embedded software, microservices, full-stack, DevOps and data science.
- Built and ran the platform operating several dozen container farms in France and the UAE, used daily by growers, operations and sales: edge and cloud infrastructure, data and analytics, back-office and mobile apps, with failsafes for remote operation.
- Shipped on the hardware construction calendar, so software never delayed a planting.
- Led the rewrite from a Kotlin monolith to Go microservices as farms moved from shared servers to dedicated compute per container, limiting the impact of a server failure to one container instead of eight. Delivered on schedule.

Lead Software Engineer

2016 – 2018

- Owned the first generations of the proprietary farming software, from industrial IoT automation to agronomic domain modelling.
- Delivered remote crop management for year-round, commercial-scale indoor strawberry production, including a pilot farm in Dubai operated over 4G.

2011 – 2016

Co-founder & Technical Director · 46cl · Lyon, FR

- Co-founded a web, mobile and UX agency and ran it for six years with a team of developers and designers, for clients from communications agencies to corporations.
- Created and led development of Mayocat Shop, an open source multi-tenant commerce platform on the JVM spanning storefronts, merchant administration, payments and content management. Production sites still run on it 12+ years later.

2007 – 2011

Software Engineer · XWiki · Paris, FR

- Core committer on the XWiki open source platform, from back-end services to user-facing features, including the Bepin editor integration and Markdown rendering support.
- Bootstrapped the Iași office in Romania on site over 18 months: hired, trained and managed its development team.
- Led customer and partner projects from pre-sales to delivery. Mentor for Google Summer of Code in 2008.

2005 – 2006

Software Developer Intern · Frog Navigation Systems (now Oceaneering) · Utrecht, NL

Black-box QA suite in Python for the AGVs' embedded computers, log mining for fault patterns, and CORBA services in Java.

PROJECTS

2025 – present

Typebar

Canvas-native rich-text engine with its own layout, text measurement, IME input and undo/redo, built for consistent performance on large documents. TypeScript with zero runtime dependencies. Private beta.

2025 – present

Savannah

Desktop writing app built on Typebar with Electron.

2026 – present

Tapemark

Designed and built an open source SQLite administration toolkit with an embeddable web UI and a CLI, running on Node.js and Cloudflare D1 through a framework-independent core.

PUBLICATIONS

Development of a Modular and Deployable Plant Production System for Lunar and Martian Habitats

Co-author · International Conference on Environmental Systems, 2026 · doi.org/10.32865/2346/108859

Gravilab: An Advanced Random Positioning Machine for Arbitrary Gravity Simulation

Co-author · International Conference on Environmental Systems, 2026 · doi.org/10.32865/2346/108860

SKILLS

Programming	TypeScript, Python, Go, Java, Kotlin
Frontend	React, Next.js, Lit, Web APIs, canvas, PWA
Backend	GraphQL, PostgreSQL, microservices, offline-first architectures
Architecture	Library and framework design, extensible platforms, developer tooling
Infrastructure	Docker, Ansible, Terraform, CI/CD, Cloudflare Workers, Prometheus, Loki, Grafana
Industrial	Embedded Linux, IoT automation, Modbus, MQTT, IT/OT integration
Product	Product design, UX, discovery, brand and marketing
Leadership	Hiring, mentoring, team management, stakeholder management
Workflow	Claude Code, Codex, agent-assisted development, automated testing

EDUCATION & LANGUAGES

IMT Nord Europe, engineering degree (MSc), 2007 · French, native · English, fluent
